

Quality Management (QM)

Curriculum: Introduction to S/4HANA using Global Bike

Teaching material - Information

Teaching material - Version

- 3.2 (February 2018)
- Software used
 - SAP S/4HANA 1709
- Model
 - Global Bike
- Prerequisites
 - No Prerequisites needed

Module Information

Authors

- Tim Böttcher
- Babett Ruß

Target Audience

- Beginner

Module Information

Learning Objectives

You are able to

- name functionalities of the QM module.
- define the central organizational structures of the QM module.
- summarize the master data which is most important for the QM module.
- explain a standard QM process.

Functionality

- Quality Planning
- Quality Inspection
- Quality Control
- Quality Certificates
- Quality Notifications
- Test Equipment Management
- Inspection Using Multiple Specifications
- Stability Study
- Control in Logistics
- Archiving
- Data Transfer

Unit Overview

- QM Organizational Structure
- QM Master Data
- QM Processes
- What is new in S/4HANA

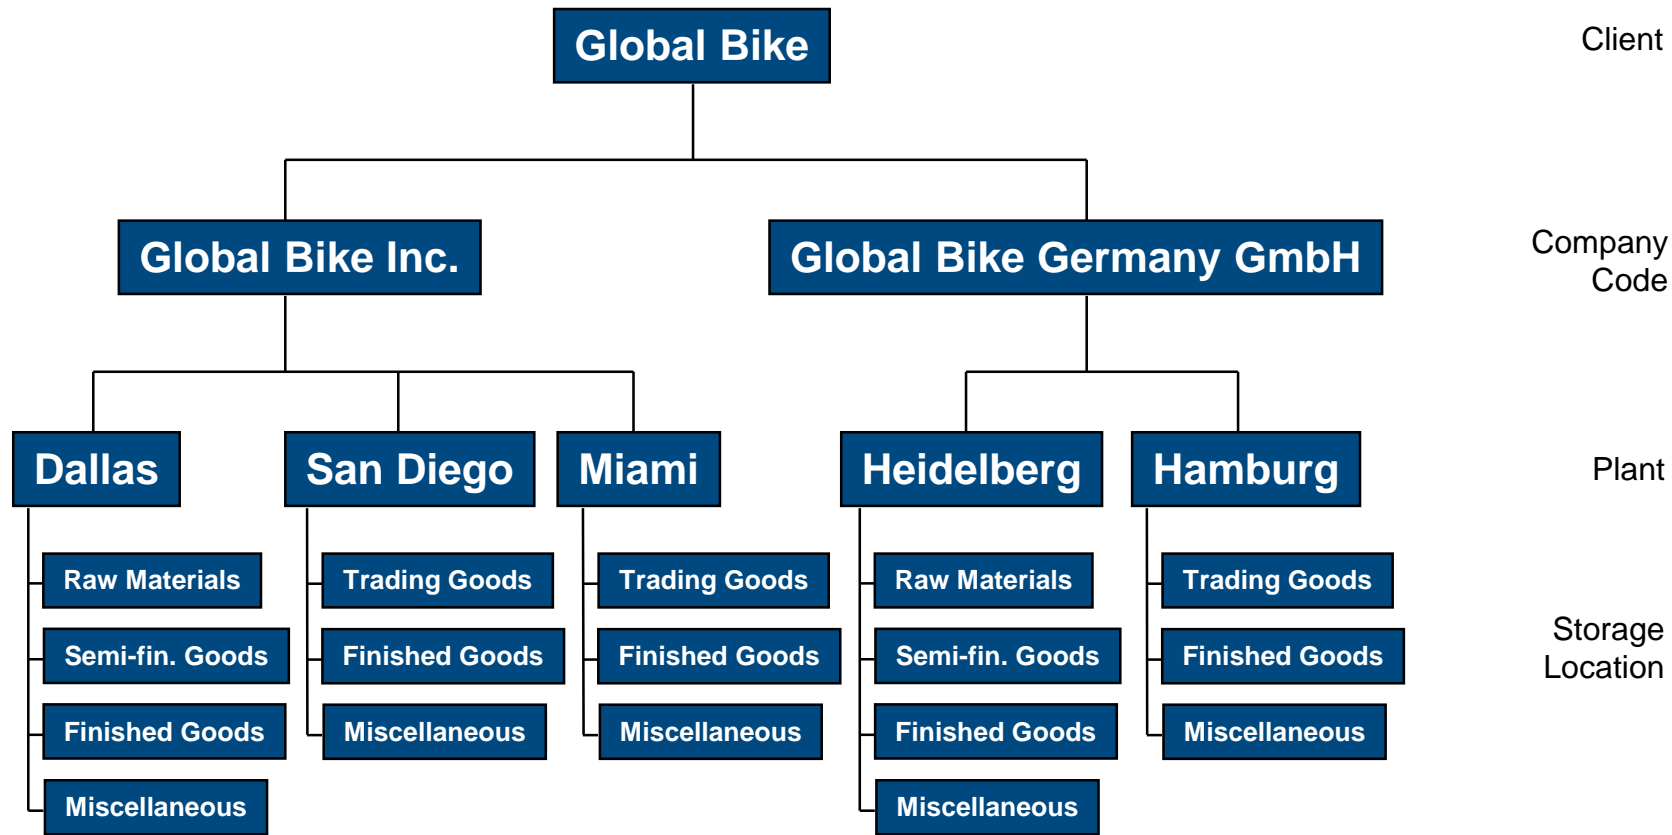

QM Organizational Structure

- Client
 - An independent environment in the system
- Company Code
 - Smallest org unit for which you can maintain a legal set of books
- Plant
 - Operating area or branch within a company
 - Manufacturing, distribution, purchasing or maintenance facility
- Storage Location
 - An organizational unit allowing differentiation between the various stocks of a material in a plant

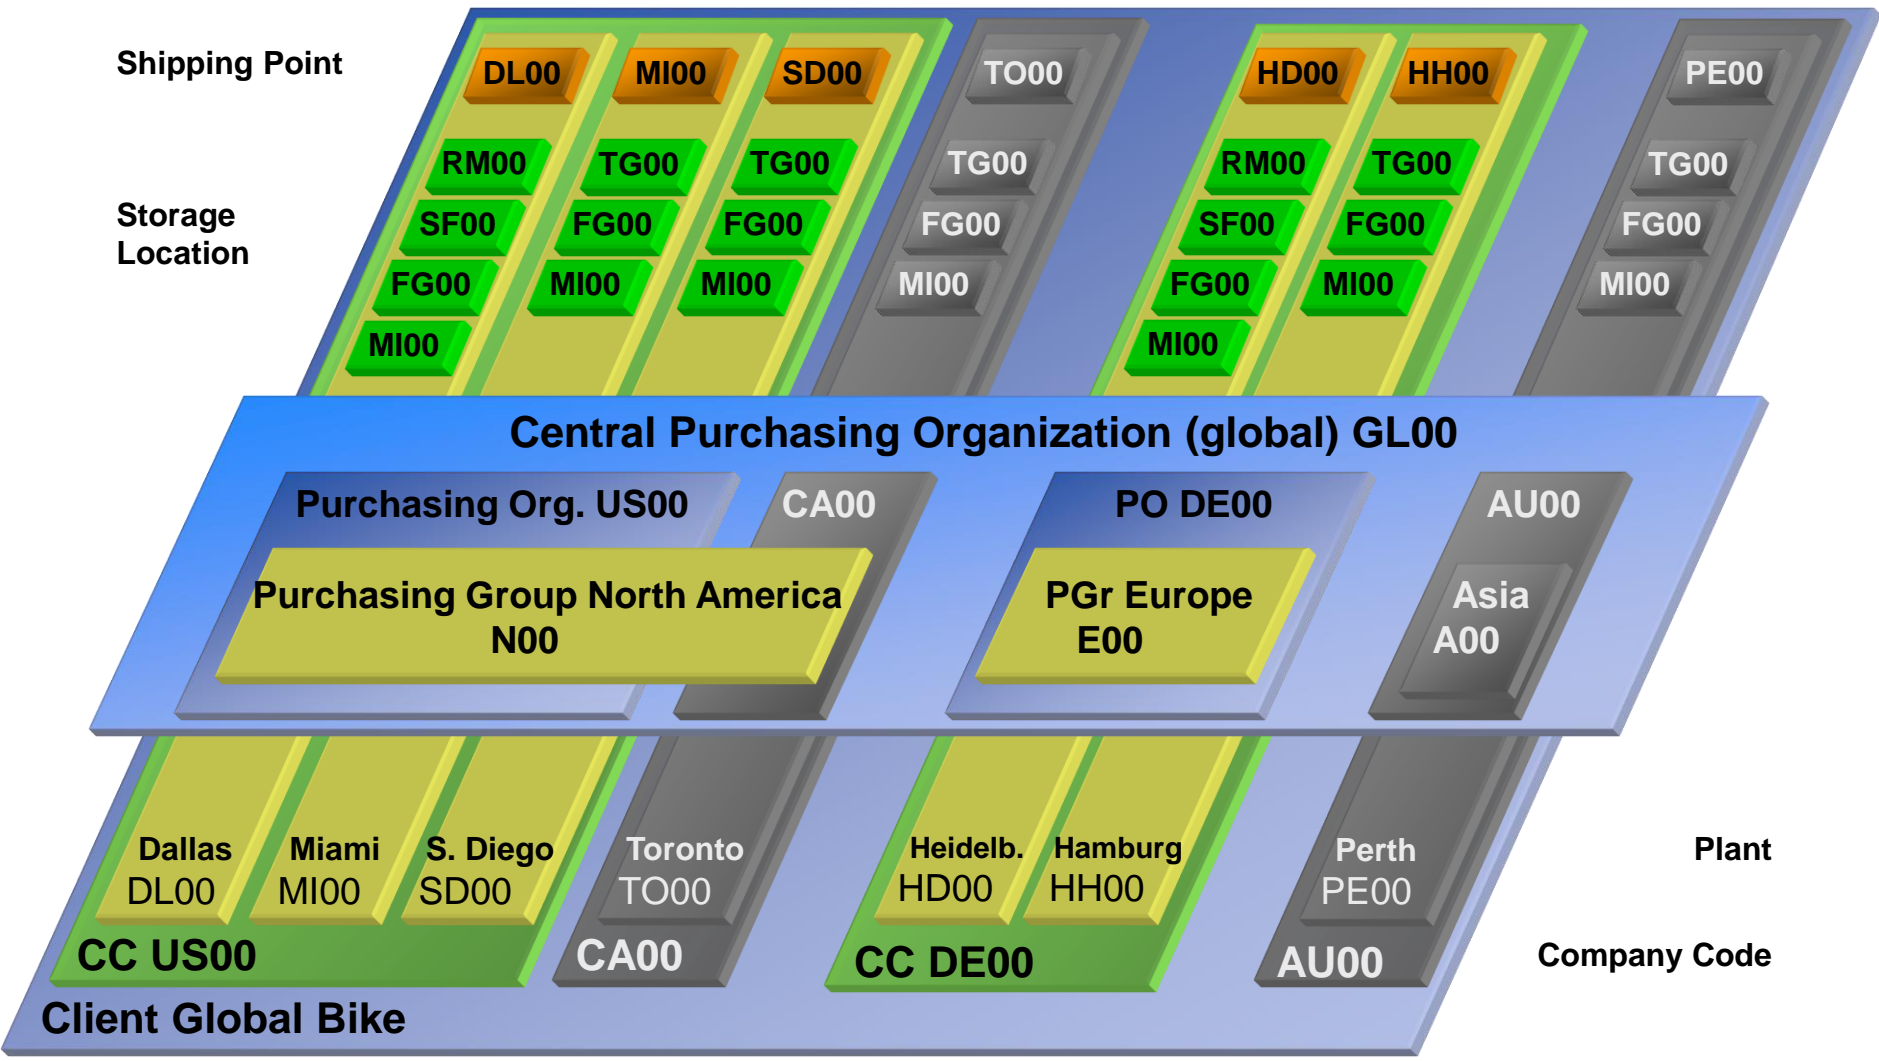

QM Organizational Structure

- Purchasing Organization
 - The buying activity for a plant takes place at the purchasing organization
 - Organization unit responsible for procuring services and materials
 - Negotiates conditions of the purchase with the vendors
- Purchasing Group
 - Key that represents the buyer or group of buyers who are responsible for certain purchasing activities
 - Channel of communication for vendors

Global Bike Structure for Quality Management

Global Bike Enterprise Structure in SAP ERP (Logistics)

Agenda

- QM Organizational Structure
- QM Master Data
- QM Processes

Customer Master Data

- Customer Master
 - Contains all of the information necessary for processing orders, deliveries, invoices and customer payment
 - Every customer MUST have a master record
- Created by Sales Area
 - Sales Organization
 - Distribution Channel
 - Division

The screenshot shows the SAP Customer Master Data display for Business Partner 2001. The header bar includes the SAP logo and the text "Display Organization: 2001, role FI Customer". Below the header, there are tabs for "Company Code", "ETM Data", "Relationships", "Settings", and "More". The main content area is divided into sections: "Name", "Search Terms", "Special Customer", "Standard Address", and "Street Address".

Name Section:

- Title: 0003 Company
- Name: Philly Bikes
- Salutation: 00

Search Terms Section:

- Search Term 1/2: 000

Special Customer Section:

- VIP: ☐
- Undesirable Customer: ☐
- Reason Undes.:
- Comment:

Standard Address Section:

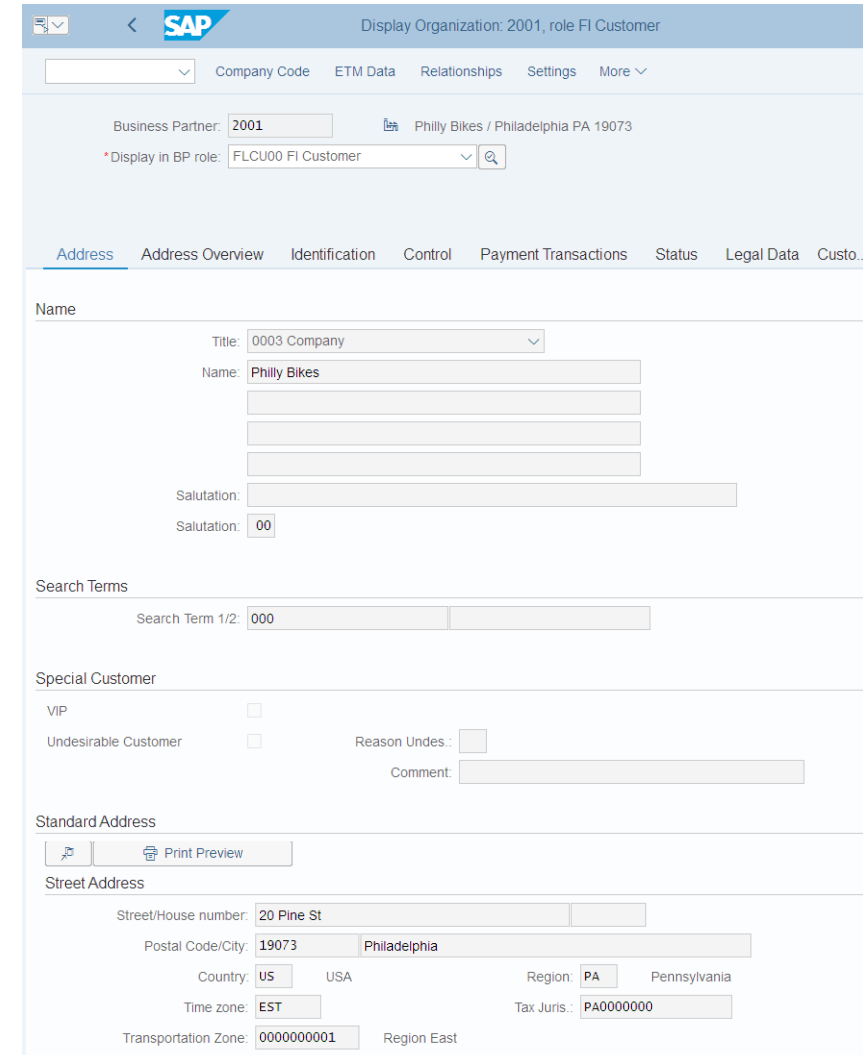

- Print Preview:

Street Address Section:

- Street/House number: 20 Pine St
- Postal Code/City: 19073 Philadelphia
- Country: US USA
- Region: PA Pennsylvania
- Time zone: EST
- Tax Juris.: PA00000000
- Transportation Zone: 0000000001 Region East

Customer Master Data

- The customer master information is divided into 3 areas:
 - General Data
 - Company Code Data
 - Sales Area Data

The screenshot shows the SAP Customer Master Data display for Business Partner 2001, role FI Customer. The interface includes a top navigation bar with the SAP logo and a breadcrumb trail: Display Organization: 2001, role FI Customer. Below this, there are tabs for Company Code, ETM Data, Relationships, Settings, and More. The main content area is divided into sections: Name, Search Terms, Special Customer, Standard Address, and Street Address. The Name section shows the Title as '0003 Company' and the Name as 'Philly Bikes'. The Search Terms section shows a search term of '000'. The Special Customer section includes checkboxes for VIP and Undesirable Customer, and a field for Reason Undesirable. The Standard Address section includes a Print Preview button. The Street Address section shows the Street/House number as '20 Pine St', the Postal Code/City as '19073 Philadelphia', the Country as 'US USA', the Region as 'PA Pennsylvania', the Time zone as 'EST', the Tax Jurisdiction as 'PA00000000', and the Transportation Zone as '0000000001 Region East'.

Material Master Data

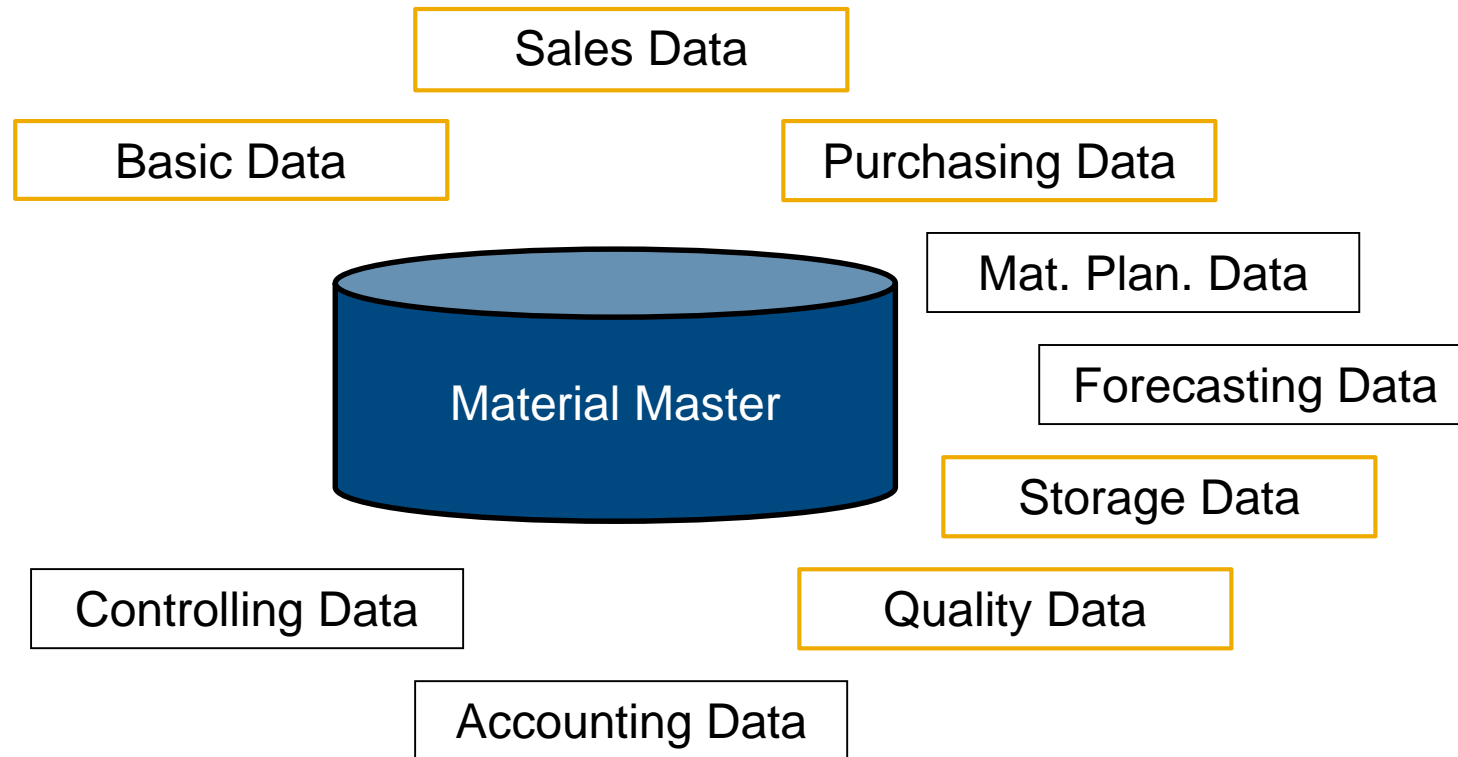

■ Material Master

- Contains all the information a company needs to manage about a material
- It is used by most components within the SAP system
 - Sales and Distribution
 - Materials Management
 - Production
 - Plant Maintenance
 - Accounting/Controlling
 - Quality Management
- Material master data is stored in functional segments called Views

The screenshot displays the SAP Material Master Data for material **DXTR1000**, described as **Deluxe Touring Bike (black)**. The interface is organized into several functional segments:

- General Data:** Includes fields for Base Unit of Measure (EA, each), Material Group (BIKES), Old material number, Division (BI), Product allocation, X-plant matl status, Assign effect. vals, Ext. Matl Group, Lab/Office, Prod. hierarchy, Valid from, and GenItemCatGroup (NORM, Standard item).
- Material authorization group:** Includes the Authorization Group field.
- Dimensions/EANs:** Includes Gross weight (8.510), Net weight (8.510), Volume (0.000), Size/dimensions, EAN/UPC, Weight unit (G), and Volume unit.
- Packaging material data:** Includes the Matl Grp Pack Matis field.

Sales specific information:

Delivering Plant
Loading Grp

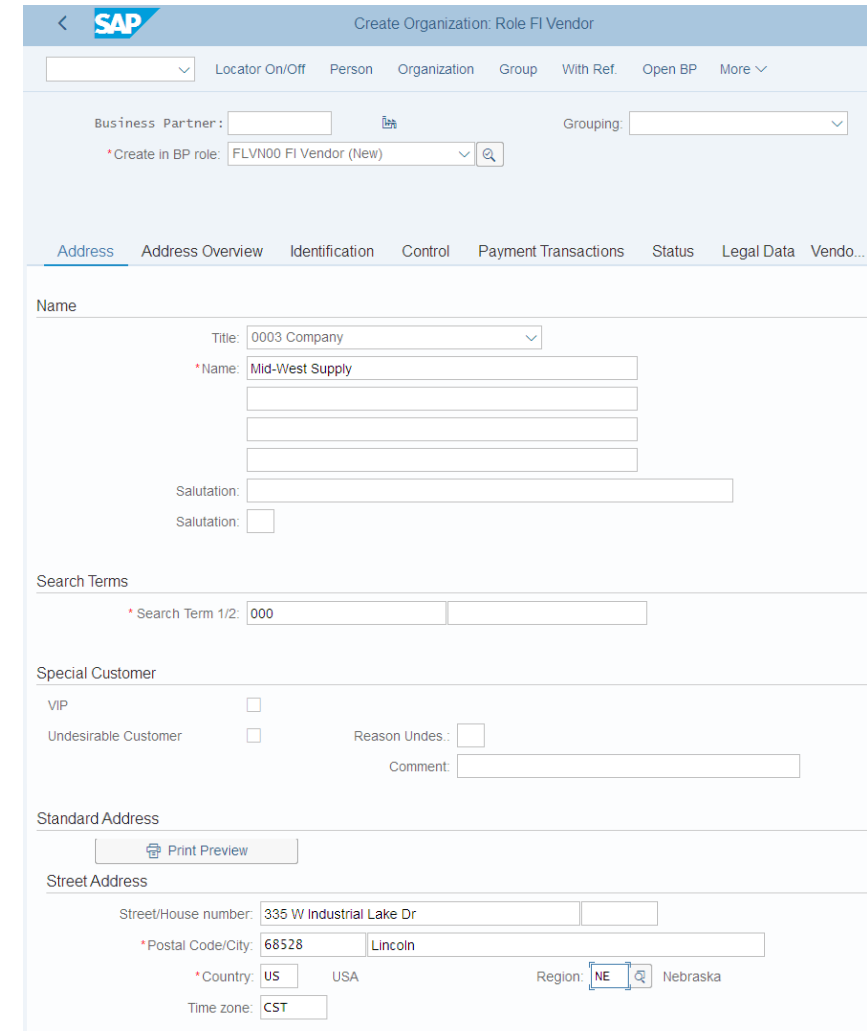

Storage Location specific information:

Stock Qty

Vendor Master Data

- Vendor Master
 - Contains all the necessary information needed to business with an external supplier
 - Used and maintained primarily by the Purchasing and Accounting Departments
 - Every vendor MUST have a master record

The screenshot displays the SAP 'Create Organization: Role FI Vendor' form. The top navigation bar includes the SAP logo and a title bar. Below the title bar, there are tabs for 'Locator On/Off', 'Person', 'Organization', 'Group', 'With Ref.', 'Open BP', and 'More'. The 'Business Partner' field is set to 'FLVN00 FI Vendor (New)'. The 'Grouping' field is empty. The 'Address' tab is selected, showing fields for 'Name', 'Title' (0003 Company), 'Name' (Mid-West Supply), 'Salutation', and 'Search Terms'. The 'Special Customer' section includes checkboxes for 'VIP' and 'Undesirable Customer', a 'Reason Undes.' field, and a 'Comment' field. The 'Standard Address' section has a 'Print Preview' button. The 'Street Address' section includes fields for 'Street/House number' (335 W Industrial Lake Dr), 'Postal Code/City' (68528 Lincoln), 'Country' (US), 'Region' (NE Nebraska), and 'Time zone' (CST).

- QM Master Data
- QM Processes
 - Quality Management
 - Quality Management in Procurement
 - Quality Management in SD
- What is new in S/4HANA

QM Process

Quality Information Record

- If a quality assurance agreement or vendor release is required for a material, a Quality Info. Record must be created
- Determines how a material can be processed further
- when a quotation or purchase order is created, the system checks whether a quality info record is required and available for the combination of material and vendor
- System also checks, whether the vendor and material-vendor combination is blocked or released for quotations, purchase orders and/or goods receipt

Inspection Plan

- Can be created for different uses as model inspection, carrying out an audit, preliminary series inspection, goods receipt inspection, goods issue inspection, inspection of stock transfers, inspections in repetitive manufacturing
- Defines which characteristics are to be inspected in each inspection operation and which test equipment is to be used in the inspection
- Several materials can be assigned to an inspection plan
- Several inspection plans with different inspection operations or inspection characteristics can be created for a material or combination of material, vendor and manufacturer, or material and customer

Inspection Lot

- Request to a plant to inspect a specific quantity of material or one or more pieces of equipment or functional locations
- Documented by an inspection lot record
- Used to record, process and manage information for a quality inspection
- Whenever materials are moved from one place to another under certain conditions, the QM component can automatically create inspection lots
- The system can also create an inspection lot automatically if a delivery is created in the SD component for an inspection-relevant material
- Can be created automatically or manually

Perform Inspection

- Inspection of sample units of the inspection lot
- Number of non-conforming sample units entered in the SAP System

Usage Decision

- Confirms that all physical samples have been valuated and the inspection has been completed
- Specifies whether the goods in the inspection lot have been accepted or rejected for use
- Inspection lot stock can be posted to different stocks
 - Unrestricted use
 - Scrap
 - Sample usage
 - Blocked stock

QM Process in Procurement

Quality Management in SD

SAP QM Module Integration

- High integration in other SAP modules including:
 - SAP MM
 - e.g. maintain quality agreements
 - SAP SD
 - e.g. quality information related to customers
 - SAP PP
 - e.g. perform inspection planning
 - SAP CO
 - e.g. integrate SAP QM with controlling process

Agenda

- QM Organizational Structure
- QM Master Data
- QM Processes
 - Quality Management
 - Quality Management in Procurement
 - Quality Management in SD
- What is new in S/4HANA?

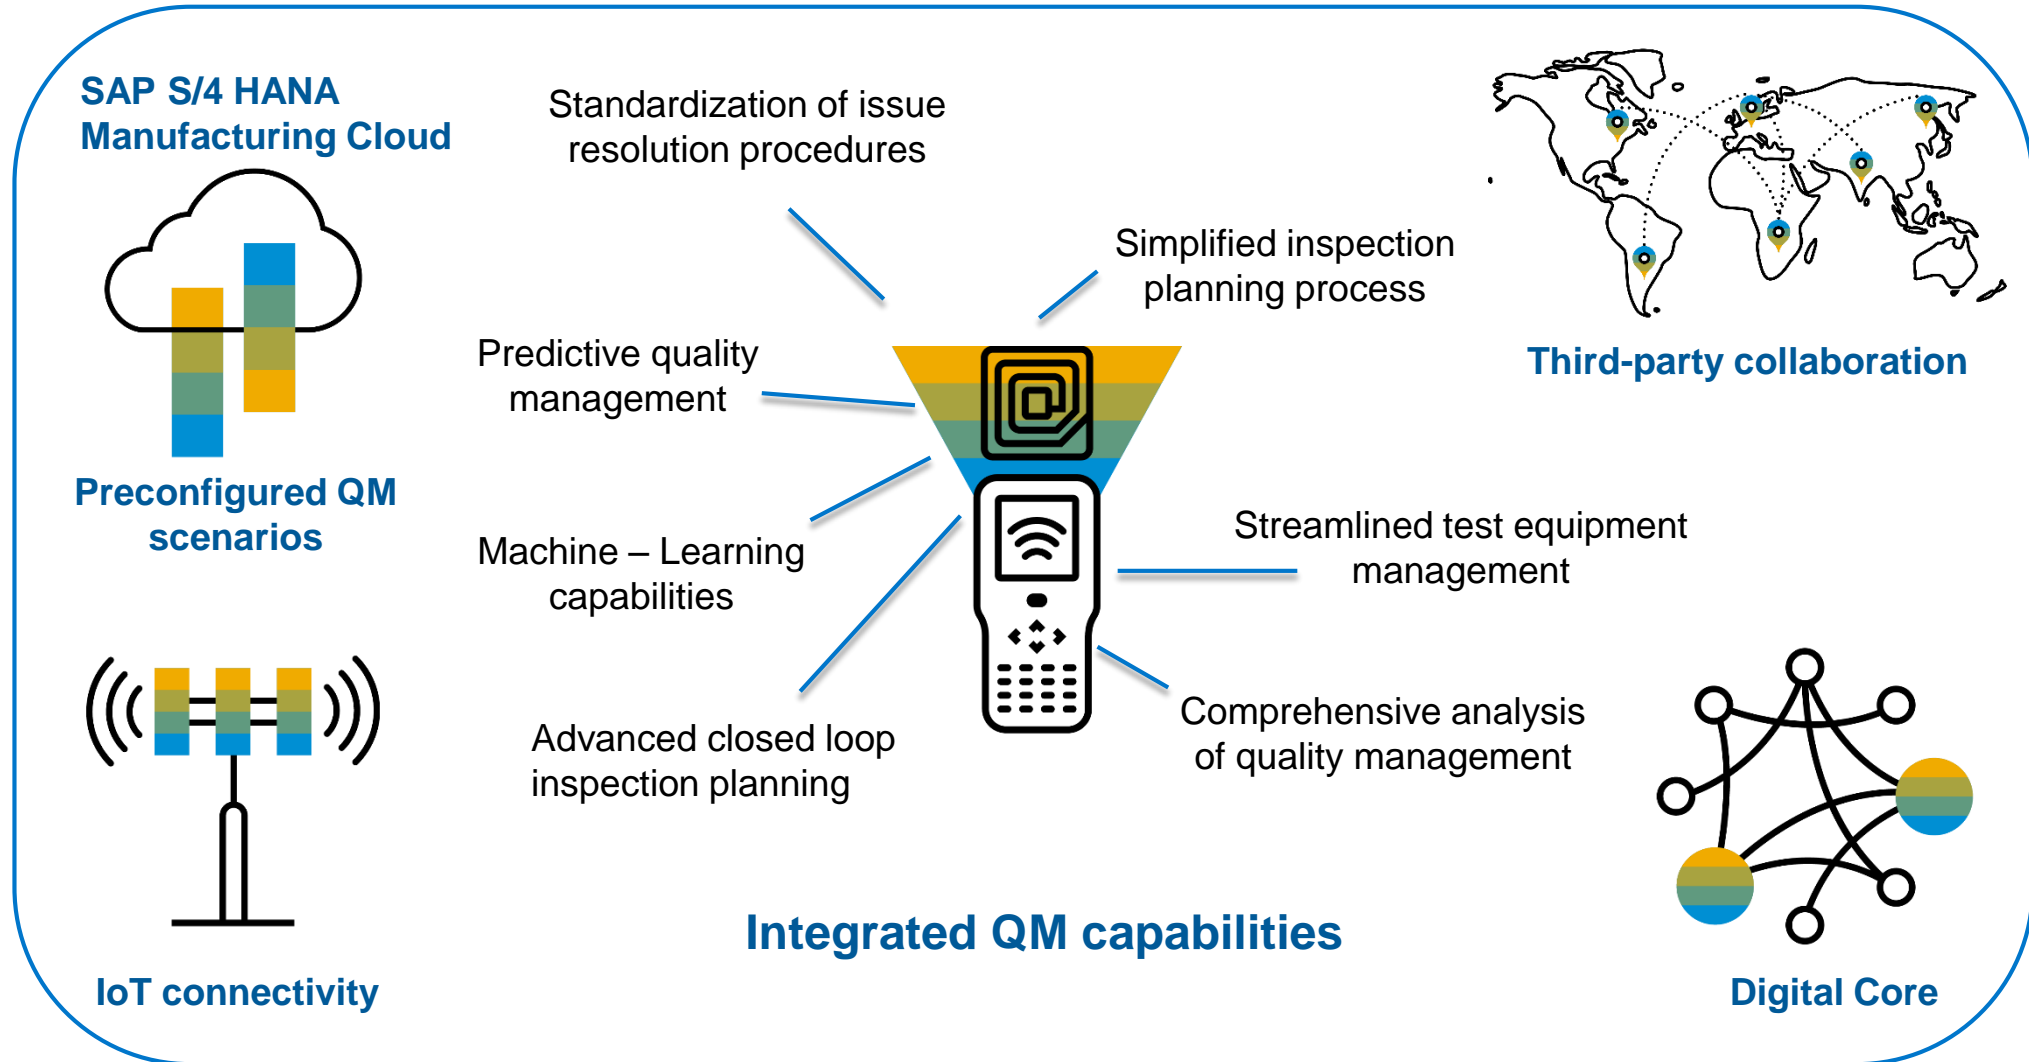

Innovations in S/4HANA in QM

Integrated QM capabilities

- Challenge: mass personalization while ensuring consistent quality in every product
- Manufacturers require flexible and integrated QM processes from design to final delivery
- With **S/4HANA**, Quality management becomes fully integrated in the entire quality process
 - Improves the Segment of One process
- Streamlined and exceptional end user experience together with new functionalities

Innovations in S/4HANA in QM

Integrated QM capabilities

Innovations in S/4HANA in QM

Preconfigured core processes

Procurement

Inventory Management

Production

Sales

Quality Management

- **Quality management in procurement**
 - Regular quality inspection process at goods receipt
 - Quality inspection process with dynamic modification
 - Quality inspection process with material-supplier release
- **Quality management in stock handling**
 - Post unrestricted or blocked stock to quality inspection stock
 - Post quality inspection stock to different storage location
- **Quality management in discrete manufacturing**
 - Goods receipt from production
 - Within production process
- **Quality management in sales**
 - Goods issue only with accepted quality

Innovations in S/4HANA in QM

Role-specific Fiori launchpads

- Core QM processes supported by new roles
- New personalized Fiori launchpads for the following roles:

Quality planner

- Creating QM data
- Manage plans
- Provide basis for inspection

Quality technician

- Execute quality inspections
- Record the results

Quality engineer

- Monitoring quality inspections
- Analysis of test results

Quality manager

- Establishing quality standards/ procedures
- Set up of controls

Quality auditor

- Check products based on specific inspection plans

Calibration technician

- make sure that testing devices are calibrated correctly

➤ Typical transactions/ apps are combined in business catalogs and assigned to the different roles

Innovations in S/4HANA in QM

New Fiori apps

- New Fiori apps with exceptional end user experience together with new functionalities
 - For example: App for recording results of quality inspections
 - Quality technicians can record the results of their quality inspection easily and efficiently
- In order to achieve this the app provides flexible and state-of-the-art worklists
